19. (New) The method of claim 18, wherein  
one of the indications from the pixel sensor indicates a first primary color component;

and

another one of the indications from the pixel sensor indicates another primary color component different from the first primary color component.

20. (New) The method of claim 18, further comprising:  
converting the indications from the pixel sensor into a digital representation; and  
storing the digital representations in the storage locations in response to the coupling.

21. (New) The method of claim 18, further comprising:  
forming a pixel sensor array that includes the pixel sensor.
